OPERATING LIMITS

Thermal carrier: water
 Water temperature: + 5°C ÷ +95°C
 Air temperature: -20°C ÷ + 43°C
 Power supply: 230 V +/-10 %
 Maximum operating pressure: 10 bar

The technical and dimensional data indicated in this catalogue are subject to modifications in the view of the improvement of the product.

1 MAIN FEATURES

The range of PWN, ducted units, has been designed for conditioning rooms that require the false ceiling installation with medium head (60Pa) particularly versatile and silent.

Proposed in 9 models with air flows from 400 to 1200 m³/h, available pressure head 60 Pa and cooling capacity from 2,8 to 10,3 kW.

The special constructive solution allows to expand the basic model thanks to a wide range of modular accessories and permit the installation of PWN units in shopping centre, hotel rooms, meeting rooms, etc..

The peculiar constructive features are:

- > Horizontal installation in false ceiling
- > Reduced height (240 mm) on the whole range
- > Standard 7 speed motors connected in the main terminal board
- > Big capacity condensate drip tray which is extended beyond the hydraulic connections allowing the collection of condensate also from the control valves. The decentralized positioning reduces the installation spaces remarkably.
- > anti-vibration damper on fixing slots to avoid the transmission of vibration to the supporting structure.
- > Possibility of connection to the circular flexible ducts (φ200 mm) or to rectangular ducts
- > The wide range of accessories to respond effectively to any installation requirements.:
 - electromechanical and microprocessor wall-mounted controls;
 - possibility of connection to the ERGO-nets;
 - accessories for air duct connection: air inlet and outlet cassettes, inlet and outlet grilles;
 - inlet plenum;
 - air inlet and outlet silencer
 - additional heat exchanger for post-heating in 4 pipe units
 - additional electric heating elements

2 CONSTRUCTIVE FEATURES

- > Bearing structure made of galvanized steel, duly insulated with anticondensing material and self-extinguishing class 1.

The unit is completed by the following:

- big capacity condensate drip tray for the collection of condensate from the heat exchanger and from any eventual control valves;
- wiring box positioned on the hydraulic connection side to reduce the installation spaces;
- slots for fast mounting.
- > Dual intake centrifugal fans made of aluminium, forward blade profile, with statically and dynamically balanced impellers , coupled directly to the electric motor.
- > 7 speed electrical motor, with permanent fitted condenser and thermal protection, mounted on vibration damping support.
- > High efficiency heat exchanger with 3,4 or 6 rows, made of copper tube and aluminium fins secured to the tubes by mechanical expansion. It is fitted with brass manifolds and air valves . The heat exchanger, usually supplied with left hand water connections, can be turned by 180°.
- > Air filter made of acrylic fibre, filter class EU2, positioned on air inlet, removable from the bottom drawer.

3 AVAILABLE OPTIONS

CONTROL PANELS AND THERMOSTATS	
CD	Recess wall-mounted speed switch
CDE	Wall-mounted speed selector
TD	Wall-mounted control with speed selector, electromechanical thermostat and summer/winter selector
TDC	Wall-mounted control with speed selector and electromechanical thermostat selector,
TD4T	Wall-mounted control with speed electromechanical thermostat and summer winter selector for 2/4 pipe systems with valves
MCB	Wall-mounted microprocessor control - GALLETTI model MYCOMFORT BASE
MCM	Wall-mounted microprocessor control - GALLETTI model MYCOMFORT MEDIUM
MCL	Wall-mounted microprocessor control - GALLETTI model MYCOMFORT LARGE
LED503	Recess wall-mounted microprocessor control
MCSWE	Water probe for microprocessor controls model MYCOMFORT BASE,MEDIUM, LARGE and LED503.
MCSUE	Humidity sensor for on-board microprocessor controls model myCOMFORT MEDIUM and myCOMFORT LARGE.
TC	Fan stop thermostat: electromechanical thermostat for minimum water temperature during heating mode
T A	Electromechanical room thermostat
T A 2	Electromechanical room thermostat with summer/winter selection
CSD	Wall-mounted control for proportional opening and closing of the motor driven air intake louver
KP	Power interface for connecting in parallel up to 4 fan coil units to one control
PLENUM AND CONNECTIONS FOR INTAKE AND DELIVERY	
PMA	Intake and delivery plenum, not insulated with spigot φ 200
PMAC	Intake and delivery plenum, insulated with spigot φ 200
PAF	Front intake plenum, not insulated with spigot φ 200
RD	Straight connection for intake/delivery, not insulated
RDC	Straight connection for intake/delivery, insulated
R90	90° connection for intake/delivery, not insulated
R90C	90° connection for intake/delivery, insulated
FLEXIBLE DUCTS - CAPS	
TFA	Not insulated flexible ducts, φ 200
TFM	Insulated flexible ducts, φ 200
TP	Plastic caps φ 200
AIR INLET AND OUTLET PLENUM BOX	
CA	Air inlet plenum box with double row grille
CAF	Air inlet plenum box with double row grille and filter G2
CM	Insulated air outlet plenum box with 2 way grille
INTAKE AND DELIVERY SOUND ATTENUATOR	
SIL	sound attenuator for intake/delivery
AIR INLET AND OUTLET GRILLES	
GM	Aluminium air outlet grille with double row fins and frame
GA	Aluminium air outlet grille with frame
3-WAY VALVE WITH ON/OFF ELECTROTHERMAL MOTOR	
VK	3-way valve with ON/OFF electrothermal motor and hydraulic kit
KSC1	Condensate removal kit
ADDITIONAL HEAT EXCHANGER ASSEMBLY	
MDF	Additional heat exchanger assembly for hot water operation
ADDITIONAL ELECTRIC HEATER	
RE	Electric heating element complete with installation kit, safety devices, power relay box, heat resistant grilles
FRESH AIR INTAKE WITH LOUVER	
SM	Motor driven external air intake louver

The aforesaid performance is related to the following conditions.

Air flow:

- related to the rated usable static pressure, at max. speed (7)

Cooling:

- rated air flow

- water inlet temperature 7°C

- water outlet temperature 12°C

- air temperature with dry bulb 27°C

- air temperature with moist bulb 19°C (47% relative humidity)

Heating:

- rated air flow

- water inlet temperature 70°C

- water outlet temperature 60°C

- air temperature 20°C

Note

For the precise calculation of the performances, with air flow rate and available static pressure out of the nominal conditions, please refer to the Galletti selection software.

8 INSTALLATION SUGGESTIONS

PWN units are suitable for concealed installation, for horizontal operation. Choose the unit position to have the best ductwork path.

We suggest to connect the different optional of the unit before its final installation and following the instruction reported in the user manual.

The suction and delivery side are rectangular provided with holes for the connection with other options

- To connect the unit to rectangular ductsw we suggest the use of the RD or RDC options, to be mounted respectively on the suction/delivery side.
- To connect the unit to flexible dicts, we suggest the use of the PMA or PMAC options, to be mounted respectively on the suction/delivery side.

Ductworks, in particular the air outlet one, must be insulated to avoid moisture formation.

Keep free space around the fan coil to allow proper operation of the unit and ordinary and extraordinary maintenance.

Install the remote control panel, if any, in a position that can easily be reached by the user to set the functions and that is suitable for the proper detection of the temperature, if provided.

Therefore avoid:

- positions directly exposed to sunlight;
- positions exposed to hot or cold draughts;
- obstacles preventing the proper temperature detection.

If the system is shut down during the winter months, drain off the water from

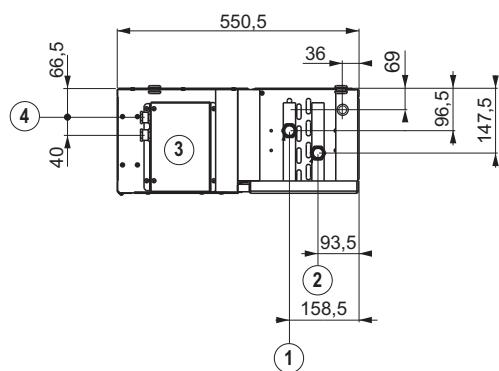

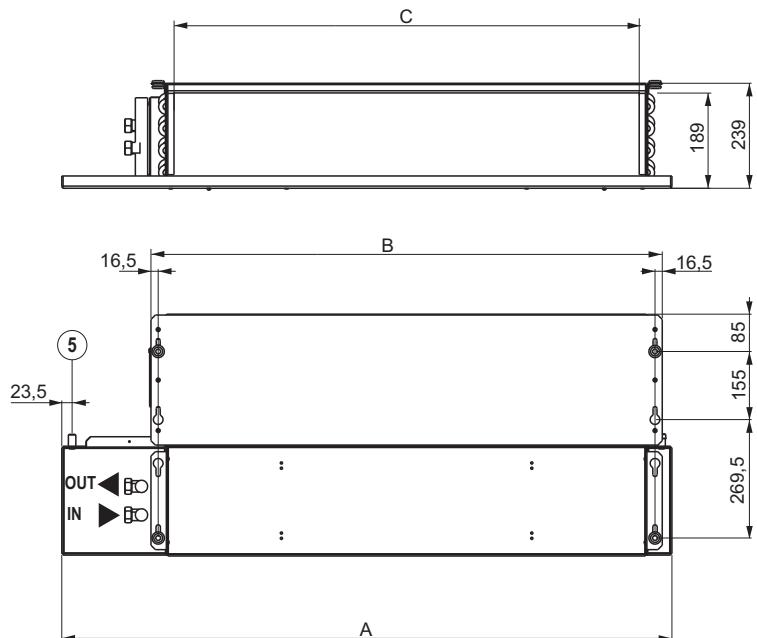

the system to prevent damage due to freezing; if antifreeze solutions are used, check the freezing point using the table shown at the foot of the page.

Glycol percentage in weight	0	10	20	30	40
Freezing temperature (°C)	0	-4	-10	-16	-24
Capacity correction factor	1,00	0,97	0,92	0,87	0,82
Pressure drop correction factor	1,00	1,05	1,10	1,15	1,20

Coefficients should be used only for a quick caluculation; to obtain precise data please refer to the Galletti calculation software.

10 WIRING DIAGRAMS

WARNING! Turn off the power supply before beginning any wiring connections.

The dashed lines connections must be carried out by the installer.

Each fan-coil thermal-ventilating unit requires a switch (IL) on the feeder line with a distance of at least 3 mm between the opening contacts, and a suitable safety fuse (F).

The fan's motor is provided with 7 speed.

ATTENTION:

The COMMON wire of the motor is the WHITE one: if connected incorrectly the motor would be damaged irreparably.

On the wiring diagram the following abbreviations are used:

IL	mains switch (not supplied)
F	protection fuse (not supplied)
3/7	3 of the 7 available
M	Motor
WH	White = commun
BK	black = velocità massima
BU	blue
BN	brown
GY	grey
GN	green
YE	yellow
RD	Red = minimum speed
GNYE	yellow/green = ground (PE)
SF	Centralized mode selection switch (not supplied)
VK	water valve (230V ON-OFF)
VKC	Child water valve (230V ON-OFF)
VKH	Hot water valve (230V ON-OFF)
KP	power interface for the connecting up to 4 units to one control panel
EXT	external auxiliary contact
RHC	Centralized mode selection switch (not supplied)
TC	Fan-off thermostat

MOTORS ELECTRICAL DATA

PWN + TD4T CONTROL PANEL, WITH 1 VALVE

PWN + TD4T CONTROL PANEL, WITH 2 VALVES

11 ACCESSORIES

CD - flush wall-mounted speed selector

Flush wall-mounted control panel is provided with a 4 positions (3speed + stop) rotation selector.
The CD control panel allows the ON/OFF and fan speed selection of the high pressure fan coil unit.

CDE - wall mounted speed selector

Wall mounted control panel is provided with a 3 positions (3 speed) and switch ON/OFF .
The CDE control panel allows the ON/OFF and fan speed selection of the high pressure fan coil unit.

TD - wall mounted control with speed selector, thermostat and summer-winter selector

Wall mounted control panel complete with fan speed selector, electromechanical thermostat and cooling / heating mode selector.

Fan speed control, regulation of the room temperature and cooling/heating mode selection:

- manual setting of the fan speed;
- room temperature regulation both in cooling / heating mode, by means of fan start / stop, at a manually set temperature.

TDC - wall mounted control with speed selector and thermostat

Wall mounted control panel complete with fan speed selector, electromechanical thermostat and cooling / heating mode selector.

Fan speed control, regulation of the room temperature and cooling / heating mode selection:

- manual setting of the fan speed;
- room temperature regulation both in cooling / heating mode, by means of fan start/stop, at a manually set temperature.

TD4T - wall mounted control with speed selector, thermostat and summer-winter selector, for 2/4 pipe system with valves

Wall mounted control panel provided with fan speed selector, electromechanical thermostat,

and cooling / heating mode selector; if installed it controls regulating valves.

Fan speed control and regulation of the room temperature:

- manual setting of the operation fan speed;
- regulation of the room temperature for 2 and 4 pipe systems, both in heating and cooling mode, by means of fan start/stop at a manually set temperature and by means of opening and closing of the regulating valve.

TA- wall mounted room thermostat

Automatic regulation of the room temperature:

- only in the heating mode working on the fan motor assembly and on the regulating valve, if installed (ON/OFF operation);
- only in the cooling mode working on the fan motor assembly and on the regulating valve, if installed (ON/OFF operation);
- both in cooling and heating mode, with remote mode selection working on the fan motor assembly and on the regulating valve, if installed (ON/OFF operation).

TA2 - wall mounted room thermostat with summer/winter selector

Wall mounted room thermostat with cooling / heating mode selector.

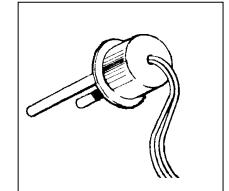

Automatic regulation of the room temperature both in heating and cooling mode, working on the fan motor assembly and on the regulating valve if installed (ON/OFF operating).

TC - fan stop thermostat: elecromechanical thermostat for minimum water temperature during heating

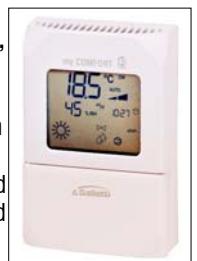

Fan stop thermostat with automatic resetting, it stops the fan motor assembly when the water temperature in the heat exchanger decreases under the set value (42°C).

Usefull only in the heating mode for installation on the finned pack of the heat exchanger.

MYCOMFORT BASE - GALLETTI wall-mounted microprocessor control, model MYCOMFORT BASE, having the following main features:

- Room air temperature reading and adjustment
- Water temperature reading (water sensor as an optional)
- Manual and automatic adjustment of fan speed
- Manual and automatic switching of heating and cooling mode depending on the water temperature within the heat exchanger or on the room temperature, with a neutral zone that can be selected in the range from 2° to 5°C.

The controller is equipped with a large display (3") to show and set all the functions of the unit.

Using the installation kit available, myComfort can be mounted on the unit

MYCOMFORT MEDIUM - GALLETTI wall-mounted microprocessor control, model MYCOMFORT MEDIUM, having the following main features :

- Room air temperature reading and adjustment
- Reading and adjustment of room humidity
- Water temperature reading (water sensor as an optional)
- Manual and automatic adjustment of fan speed
- Manual and automatic switching of heating and cooling mode depending on the water temperature within the heat exchanger or on the room temperature, with a neutral zone that can be selected in the range from 2° to 5°C.
- Serial port for Bus connection

The controller is equipped with a large display (3") to show and set all the functions of the unit.

Using the installation kit available, myComfort can be mounted on the unit

11 ACCESSORIES

MYCOMFORT LARGE- GALLETTI wall-mounted microprocessor control, model MYCOMFORT LARGE, having the following main features :

- Room air temperature reading and adjustment
- Reading and adjustment of room humidity
- Water temperature reading (water sensor as an optional)
- Manual and automatic adjustment of fan speed
- Manual and automatic switching of heating and cooling mode depending on the water temperature within the heat exchanger or on the room temperature, with a neutral zone that can be selected in the range from 2° to 5°C.
- Clock and hourly timer-programmed operation
- 2 Analogue outputs for controlling modulating devices 0-10V
- 2 Digital outputs for controlling (On/Off) external devices (no-voltage contacts)
- Serial port for Bus connection

The controller is equipped with a large display (3") to show and set all the functions of the unit.

Using the installation kit available, myComfort can be mounted on the unit

LED503 - Recess wall-mounted microprocessor control

The proposed microprocessor control panels for Galletti indoor units is completed by the LED503 command with LED display that is designed for recess wall mounting.

CONTROLLER

The control software developed by the Galletti Software Dept., features:

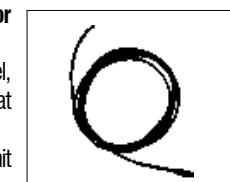

- Manual fan speed selection;
- Automatic selection of fan speed according to the difference between the set temperature and the room air temperature;
- Manual selection of heating/cooling operating mode;
- Automatic selection of heating/cooling operating mode;
- Control of 1 or 2 ON/OFF valves;
- Control of additional heating element;
- On board timer function to detect the actual ambient temperature;
- Reading of air ambient temperature, set point, fan speed and mode selection on the LED display.

SW - Water temperature sensor for microprocessor controls model MYCOMFORT and LED503

Connected directly to the microprocessor control panel, this probe measures the water temperature inside the heat exchanger.

If the temperature registered is lower than 17°C the unit works in cooling mode and the temperature range of the control panel will be referred to the cooling mode (19 / 31°C); if the temperature registered is higher than 37°C the unit works in heating mode and the temperature range of the control panel will be referred to the heating mode (14 / 26°C).

If the temperature registered is between 17°C e 37°C the control panel will disable the unit operation.

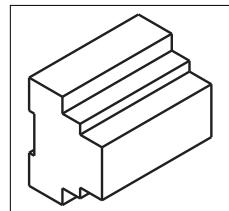

SU - Humidity sensor for on-board microprocessor controls model MYCOMFORT MEDIUM and MYCOMFORT LARGE.

KP - power interface for connection of up to 4 units to a single control panel

The KP master sleeve can be installed to control with a single control panel up to 4 units (connected in parallel).

This accessory is designed for installation on a DIN drive, usually placed on electric board, can be matched with all PWN versions.

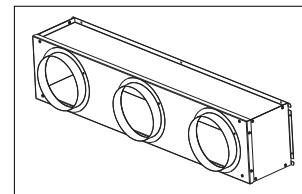

PMA / PMAC - plenum for the connection to flexible ducts

PMA e PMAC (insulated) plenums are used to connect to air distribution plants achieved by means of hoses or to other dedicated accessories.

They can be installed on both the intake and delivery line (in this case the hose should be insulated).

The spigot diameter is Φ 200 mm.

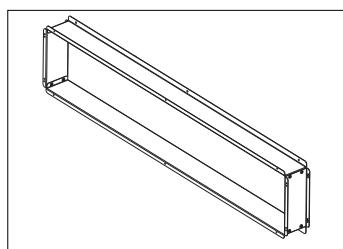

PWN

PWN	1	2	3
n° of outlet	2	3	5

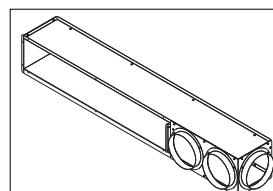

RD / RDC - Suction/delivery straight connection

The allow the connection of PWN units to rectangular ducts or directly to GM/GA grilles.

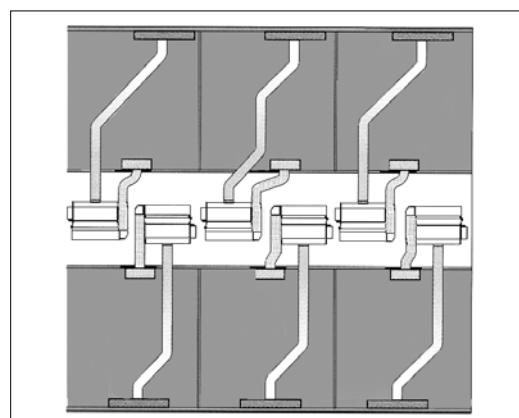

PAF - Front air intake plenum ϕ 200

Thanks to the PMA and PAF plenums it is possible to install the PWN units in installation where air suction and delivery must be carried out in a single side, reducing the space required for the installation.

Air suction is provided with ϕ 200 spigots.

TFA - Not insulated flexible ducts

Uninsulated flexible duct for the connections to the air distribution with ϕ 200 mm diameter, supplied in 6 m length undivisible.

TFM - Insulated flexible ducts

Insulated flexible duct for the connections to the air distribution with ϕ 200 mm diameter, supplied in 6 m length undivisible. The insulation of the duct is obtained by means of fiberglass, thickness 25 mm with 16 Kg/m³ density.

TP- Plastic cap

Plastic cap ϕ 200 mm for the closing on the PCOF, of the air outlet not used.

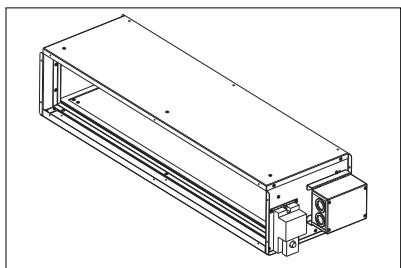

11 ACCESSORIES

SM - Serranda motorizzata di presa aria esterna

Serranda motorizzata di presa aria esterna permette di effettuare rinnovi di aria dell'ambiente direttamente dall'unità termoventilante. La quantità di aria esterna da immettere in ambiente, una volta filtrata e trattata termicamente, è regolabile proporzionalmente da 0 a 100% mediante un servomotore comandato da un potenziometro rotativo, che si trova nell'apposito comando CSD, che è previsto per installazioni ad incasso a parete.

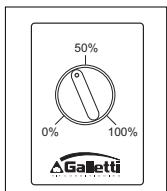

Il kit PA90 è composto principalmente da:

- A) Serranda di presa aria esterna in lamiera di acciaio zincata e predisposta per il collegamento alla macchina, ad una estremità, ed agli altri accessori previsti.
- B) Servomotore collegato direttamente al deflettore della serranda, con grado di protezione IP54, tensione di alimentazione 24V ~.
- È possibile effettuare la chiusura o l'apertura automatica della serranda su segnale di contatti ausiliari esterni (non forniti) quali termostati antigelo, timer, ecc., con possibilità di collegamento in parallelo di più servomotori ad un unico comando di apertura-chiusura.
- C) Trasformatore di tensione 230V - 24V, completo di morsettiera di appoggio, alloggiato all'interno dell'apposita scatola elettrica, che ha funzione di protezione meccanica, per impedire l'accesso alla morsettiera di collegamento ed al trasformatore.
- D) Viti autofilettanti di fissaggio.

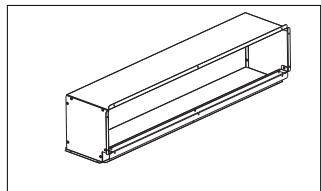

CSD - wall mounted control for proportional opening and closing of the PA90 motorized louvre

Designed for wall installation it allows the proportional opening and closing from 0 to 100% of the SM outdoor air intake motorized louvre

R90/R90C - 90° connection for intake/ delivery

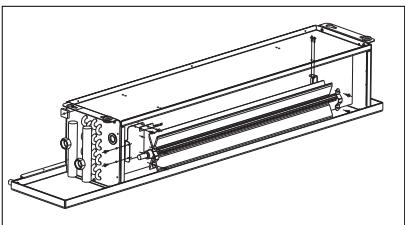

To be connected on both suction and delivery (the R90C insulated version) side directly on the PWN unit

RE - additional electric heating element

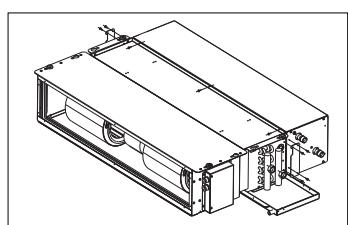

Useful as heating integration to the hot water system, the RE kit is made of an electric heater with safety thermostat (automatic and manual resetting) and power relay.

The RE electric heater kit has to be matched with the MICROPRO-D control panel and with the IPM power board for the models PWN 3.

MDF - Additional heat exchanger module for hot water operation

For installation on air delivery, the MDF module is provided with one heat exchanger, for operation with hot water up to 95°C, to be used in 4 pipe system. It can be mounted with left or right water connection indifferently.

SIL - suction/delivery sound attenuator

Manufactured in galvanised steel, with sound proof baffles and internally insulted with high density absorbing (90 kg/cm³) and 10 mm thickness.

the sound absorbing material is protected by a PCV film to avoid to release fibers or absorb dust.

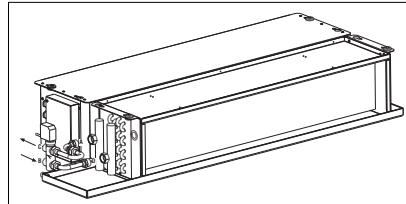

The following table is reporting the sound attenuation of the sound power level in each frequency.

125 Hz	250 Hz	500 Hz	1 kHz	2 kHz	4 kHz	8 kHz
dB	dB	dB	dB	dB	dB	dB
1,5	2,0	2,3	2,9	4,1	5,3	3,8

VK - 3 way valve with ONOFF actuator and mounting kit

The system allows the regulation of the ambient temperature by stopping the water flow into the heat exchanger.

Available for 2 pipe and 4 pipe systems, the kit is made of the components below indicated:

Valve body: 3-way with in-built by-pass (4 connections):

Actuator: normally closed, electrothermal type, 230V single phase, with ONOFF operation, it works directly on the valve shutter.

Hydraulic connections kit: made of copper tubes and brass connections.

KSC - Condensate removal kit

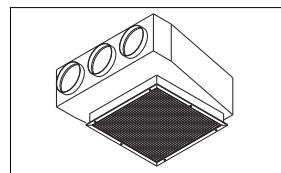

This device allows to overcome displacements in the condensate drain.

The pump can drain water up to 8 l/h and it is completed by a non return valve on the discharge side.

CA/CAF - air inlet plenum box

Intake Plenum box in galvanised sheet metal complete with circular collars (Ø 200 mm) for the connection, by means of hoses and intake grids with fixed fins, to pocket type structures, to increase the free air flow cross section.

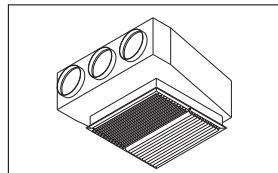

Sized to be adaptable to the modular structure of the ceiling panels, they are equipped with 2 or 3 circular collars so that they can be connected, following their suitable combination, to all the PWN units. The CA version is equipped with just the grid alone whereas the CAF version is also equipped with a flat filter in acrylic material, with filtering rating G2, housed in the standard frame.

The filter of this second type of intake box can be serviced (cleaned) on a periodic basis without having to access the unit fitted behind the ceiling panels or in a service room.

11 ACCESSORIES

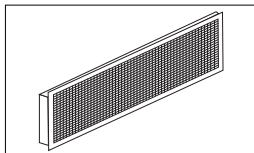

CM - Delivery plenum boxes

Delivery Plenum boxes in galvanised sheet metal complete with circular collars (\varnothing 200 mm, for the connection by means of hoses) and adjustable delivery grids. The boxes are duly insulated externally with calorized foam polyethylene in order to prevent the formation of condensate during the cooling cycle. Sized to be adaptable to the modular structure of the ceiling panels, they are equipped with 1, 2 or 3 circular collars so that they can be connected, following their suitable combination, to all the heater fans of the PWN range. All versions are equipped with adjustable fins to optimise the distribution of the conditioned air.

GM - Alluminium air outlet grille

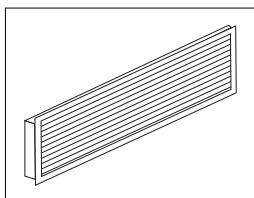

Air delivery grids with double row of adjustable fins in anodised aluminium, equipped with galvanised sheet metal frame that is used to wall-mount the grids or to fit them directly on the delivery head of the machine.

The galvanised sheet metal frame is drilled at one end so that it can be secured directly to the delivery head of the unit complete with RD connection.

GA - Alluminium air inlet grille

Air intake grids with single row of fins in anodised aluminium, equipped with galvanised sheet metal frame that is used to wall-mount the grids or to fit them directly on the intake head of the machine.

The galvanised sheet metal frame is drilled at one end so that it can be secured directly to the intake head of the unit complete with RD connection.
